

FUND OBJECTIVE & INVESTMENT POLICY

The fund aims to deliver medium to long-term capital growth over time. The fund invests in a diversified range of equities, preference shares, bonds, debentures, money market, fixed income, property markets and instruments based on the value of any precious metal. The equity allocation will be managed at a maximum effective exposure, including offshore equity, up to 75%. The fund is permitted to invest in listed and unlisted financial instruments in line with the conditions as determined by legislation from time to time. The fund will predominately invest in South African markets but is however permitted to include investments in offshore jurisdictions subject to the investment conditions determined by legislation from time to time. The fund complies with Regulation 28 of the Pension Funds Act.

Investment Management Commentary

The fund returned 0.04% for the month of September relative to a benchmark return of 0.29%. The rand appreciated by a modest 0.39% against the US dollar. We await the South African medium-term budget policy statement to be delivered on 30 October. The ratings agencies, Moody's in particular, will be scrutinizing a potential rescue plan for the embattled Eskom and tax collection relative to budget, amongst others. Following this, Moody's is expected to release a ratings review on 1 November with the two-thirds of analysts polled expecting South Africa to remain on investment grade status until at least the end of the year. We are of the opinion that a downgrade has largely been factored in, however, there will be a knee-jerk reaction should Moody's downgrade us. On top of these local catalysts, global geopolitics remain fluid which manifest in a highly volatile local exchange rate.

Economic data made for grim reading, consistent with the longer-term trends. A few key datapoints released during the month were:

- Electricity consumption for June was down 1.9% year-on-year. This follows a negative reading of 1.6% last month
- Vehicle sales for Aug were down 5.1% year-on-year. This follows a negative reading of 3.7% last month
- Business confidence continued to deteriorate despite being at its lowest level in two decades
- Retail sales for July were up 2.0% year-on-year
- Core CPI for August up 4.3%. As expected, local interest rates were left unchanged
- Second quarter GDP up 0.9% year-on-year, slightly below expectations of 0.7%

Notable activity for the fund during the month was the disposal of Dream Global Real Estate. We purchased Dream in April this year at a discount to book value with the company benefitting from a wide yield spread between funding rates and property income. This favourable dynamic was made more appealing by the confidence that we had in management to identify value enhancing property acquisitions. As it turned out, on 15th September Blackstone made a firm offer to acquire all their outstanding shares at \$16.79 – 18.5% away from the previous day's close. The share price duly increased towards this level and the position was sold. We believe we will see further consolidation, especially in the European market, and as such are screening for additional investment opportunities within this region. We also increased our stake in MasterDrilling to become the third biggest equity holding behind Naspers and Tencent. We believe the core operations are beginning to improve on the back of an increase in utilization rates across the asset base. Furthermore, two new projects provide upside optionality as the share prices is trading on depressed valuation multiples. One of these projects is their Shaft Boring System, currently in the later testing stages, which is expected to sink shafts at up to twice the speed of existing methods. Clearly this becomes very valuable to a client looking to sink a shaft up to 1.5 kilometers deep and 11.5 meters in diameter. We are attending a site visit during October where we will gather further insights as to how this exciting project is developing.

We believe the fund is well positioned to provide South African investors with a largely rand hedge product to aid in protecting the global purchasing power of their local savings, should they express concern around the prevailing political and economic climate.

Ross Beckley, CFA
Fund Manager

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website. Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request. For any additional information such as fund prices, brochures and application forms please go to www.prescient.co.za

FUND SPECIFIC RISKS

- Default risk:** The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.
- Developing Market (excluding SA) risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
- Foreign Investment risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.
- Interest rate risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.
- Property risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.
- Currency exchange risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.
- Geographic / Sector risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.
- Liquidity risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.
- Equity investment risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

GLOSSARY SUMMARY

Annualised performance: Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest return: The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

TER & TC

FEES (Incl VAT)	
Invest Management Fee	0.75%
Performance Fee	New Fund
Other Fees	New Fund
Total Expense Ratio (TER)	New Fund
Transaction Costs (TC)	New Fund
Total Investment Charge (TIC)	New Fund

The TER and TC ASISA Standard came into effect from 1 January 2016. This standard is to ensure that all ASISA members operate within the outcomes of TCF. Therefore, it is a requirement to disclose both the TER and TC numbers. Transaction Costs are not included in the calculation of TER hence we need to disclose both the TER and TC numbers separately and also Total Investment Charge which is the combination of TER and TC. This will impact the MDDs as we will have to disclose this and amend the disclaimer to cater for the definition of Total Costs.

Please note that the Total Expense Ratio and Transaction Costs cannot be determined accurately because of the short life span of the Financial Product and the funds. The TER will be available after one year.
