

FUND OBJECTIVE & INVESTMENT POLICY

The Fund aims to deliver medium to long-term capital growth over time. The Fund invests in a diversified range of equities, preference shares, bonds, debentures, money market, fixed income, property markets and instruments based on the value of any precious metal. The equity allocation will be managed at a maximum effective exposure, including offshore equity, up to 75%. The Fund is permitted to invest in listed and unlisted financial instruments in line with the conditions as determined by legislation from time to time. The Fund will predominately invest in South African markets but is however permitted to include investments in offshore jurisdictions subject to the investment conditions determined by legislation from time to time. The Fund complies with Regulation 28 of the Pension Funds Act.

Investment Management Commentary

For the month of February, the Fund returned 2.69% relative to its benchmark of 4.47% with the Rand appreciating by 0.34% against the US dollar. The Fund remains one of the top-performing local balanced funds over a rolling one-year period (as per ASISA's Multi Asset High Equity classification).

When providing commentary for February the first event which needs to be addressed, despite its lack of substance, was the budget speech delivered by Finance Minister Tito Mboweni. Mr Mboweni announced a budget which was largely expected by the market, evidenced by steady exchange rate movement on the day.

The one notable segment of the announcement which was being watched closely by many readers of this fact sheet, was whether the country's most important decision makers had made any changes to Regulation 28 and more particularly whether any changes would be made to the treatment of inwardly listed, but foreign equity tracking exchange traded funds (ETFs). The news in this regard was positive for the Fund as our offering of 80-100% Rand hedge exposure within Regulation 28 remains unique.

Sticking with local events, one cannot sum up February without mentioning commodities whose elevated prices hauled the All-Share Index upwards during the month. A weak dollar in combination with higher expectations for inflation mean the environment for a new commodities bull cycle is ripe. During the month, commodities across the spectrum soared, with the Bloomberg Commodity Index being up by 6.47% in the month.

The Fund has exposure to commodities through direct holdings in gold and platinum ETFs, as well as through a February purchase of BHP Group. We find the company's geographic revenue composition, cash flow generation ability and medium-term prospects attractive. We hope to enjoy meaningful returns from the company as the commodity cycle continues to play out, with BHP being a "big three" player in both iron ore and copper.

Turning to global events the key talking point which dominated global headlines in February was the so called "reflation trade." Reflation is a term loosely used in financial markets to define a period of increased growth, after a broad economic contraction which brings with it pricing pressures. Under such circumstances the investment community tend to bet on companies intrinsically exposed to broad economic growth, inflationary pressures, and higher yields.

This trend is one that we have been watching closely for several months, and we saw an opportunity to invest in Bank of America Corporation to take advantage of these macroeconomic conditions. We see the company, which is highly sensitive to an increasing yield curve, as a beneficiary of this reflationary environment and since we initiated the trade we have been pleased with the stock's performance.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website. Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request. For any additional information such as Fund prices, brochures and application forms please go to www.prescient.co.za

FUND SPECIFIC RISKS

- Default risk:** The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.
- Developing Market (excluding SA) risk:** Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.
- Foreign Investment risk:** Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.
- Interest rate risk:** The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.
- Property risk:** Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.
- Currency exchange risk:** Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.
- Geographic / Sector risk:** For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.
- Liquidity risk:** If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.
- Equity investment risk:** Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

GLOSSARY SUMMARY

Annualised performance: Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest return: The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

TER & TC

FEES* (Incl VAT)		The TER and TC ASISA Standard came into effect from 1 January 2016. This standard is to ensure that all ASISA members operate within the outcomes of TCF. Therefore, it is a requirement to disclose both the TER and TC numbers. Transaction Costs are not included in the calculation of TER hence we need to disclose both the TER and TC numbers separately and also Total Investment Charge which is the combination of TER and TC. This will impact the MDDs as we will have to disclose this and amend the disclaimer to cater for the definition of Total Costs.
Base Fee (including administration)	1.28%	
Performance Fee	0.00%	
Other Fees	0.19%	
Total Expense Ratio (TER)	1.47%	
Transaction Costs (TC)	0.29%	
Total Investment Charge (TIC)	1.76%
